1: We provide preclinical services focusing on but not limited to cardiovascular and metabolic platforms (myocardial infarction, stroke, heart failure, arrhythmias, diabetes, insulin resistance, hyperlipidemia, atherosclerosis, uremia, obesity etc.) including co-morbidities and large animal models. Pharmahungary offers flexible services custom tailored to your projects and interim results. New: large animal models especially for cardiovascular and metabolic indications including Medical Devices.

2: We provide clinical research services, focusing on medical devices, Investigator Initiated Trials, and niche, unique studies that need sensitive patient population, strong scientific and regulatory support, including biologics, combination products and advanced therapeutics.

3: We run internal R&D projects to develop new therapeutics. Currently three early-stage patented technologies are open for out-licensing/co-development in cardiovascular indications: Biglycan therapy (biologics), MMP inhibitors (small molecules), and microRNA therapy for ischemic diseases.
