Delta Bio 2000 Ltd. is a so-called spin-off biotechnological company founded in 2007 in the Biological Research Centre of the Hungarian Academy of Sciences on the basis of patented research results, with the main profile of performing research and development and providing biotechnological services.

The company's primary field of research and study comprises tumour diagnostics and targeted therapy, the elucidation of the molecular background of carcinogenesis, and the development of cancer therapeutic drugs. Using state-of-the-art molecular technologies, researchers of the Delta Bio 2000 Ltd. are able to detect changes in the genetic material; the state of DNA, RNA, and microRNA markers. On the one hand, within the frame of the National Public Health and Medical Officer Service (ÁNTSZ) permit, the company provides molecular genetic, laboratory diagnostic, and genetic counselling for individuals and healthcare providers; on the other hand it performs capillary and next-generation DNA and RNA sequencing for R&D laboratories.
