KRIO Family Stem Cell Bank

KRIO Institute Cell and Tissue Bank Plc was established in 1998 as spermbank. Besides that currently it is the first and biggest family stem cell bank which has provided the freezing and storing in Hungary of stem cells from the umbilical cord blood since 2004, presently for more than 32,000 families. Processing and freezing of the umbilical cord blood happens by means of AABB (Advancing Transfusion and Cellular Therapies Worldwide) accredited technology and with a laboratory background.

So far three stem cell transplantations have been carried out in Hungary from samples processed by KRIO Family Stem Cell Bank, which resulted in the complete recovery of three ill children.

The Institute is a member of the International FamiCord Group, which is the second quickest growing stem cell bank network of Europe, with more than 120,000 stored samples and nearly 400 stem cell transplantations.

Based on its wide-scale professional connections, FamiCord Group should be undoubtedly considered the most experienced European company group in the field of processing stem cell samples for transplantation purposes.
