LuminoChem Ltd was founded by chemical engineers with wide international experience and expertise in chemical and materials science R&D projects. The company specializes in developing unique chemical security solutions for the security printing industry and brand protection purposes. Our main profile is the development and manufacture of high quality fluorescent security pigments and dyes, NIR absorbing materials and antistokes (up-converter) pigments. You can also find biological paints and uniquely developed diagnostical reagents among our fluorescent and other, photophysically active products. With the combination of scientific results and industrial innovation we can work together with our clients to find the perfect solution for anti-counterfeiting applications and biotechnological research in the field of marking technologies.
