ThalesNano is a company dedicated to making dangerous and difficult chemistry safe and easy to perform while assisting advances in the scientific field of chemistry. Our management team has been deeply committed to expanding the horizons of chemistry with the goal of providing chemists with a dynamic new way of enabling them to perform new chemistry for tomorrow. The company was founded in 2002, located in Budapest, Hungary, but also has offices in the United Kingdom and United States. The company is widely recognized for its expertise developing manual or robotic continuous microreactors for the chemical industry. Researchers can now perform a wide variety of reactions and can easily scale them up, without the need for reoptimization processes to reach the production scale. Our own R&D team of engineers work on every innovation with our chemistry team to guarantee that we only create solutions where flow chemistry can offer a real advantage.
